Mansoura, Egypt

Professional Summary

Detail-oriented Molecular Biology and Applied Biochemistry graduate (GPA[redacted] from Mansoura University, with hands-on experience in bioinformatics, molecular dynamic simulations, and laboratory-based experimental research. Skilled in designing and executing experiments, analyzing complex biochemical and computational data, and translating findings into clear scientific insights. Strong foundation in molecular biology techniques, immunogenetics, and chemoinformatics tools, complemented by exposure to pharmaceutical R&D operations and product development. Seeking to contribute analytical rigor, technical problem-solving, and research skills to an R&D team focused on innovation in the pharmaceutical or biotechnology sector.

Education

Mansoura University Mansoura, Egypt
B.Sc. in Molecular Biology and Applied Biochemistry

- **GPA:** [redacted]
- **Graduation Project:** Molecular Dynamic Simulations of Egyptian KIR Genes and Their Interactions with HLA Ligands for Organ Transplantation — designed and conducted advanced bioinformatics research on immunogenetics and transplantation compatibility; ran molecular dynamic simulations to model protein–ligand interactions, generating preliminary data intended for future peer-reviewed publication; applied Conda, PyMOL, and chemoinformatics software for structural modeling, data visualization, and analysis

Research & Laboratory Experience

Summer Trainee *Summer 2024*
PharmaOverseas

- Completed 30 credit hours covering pharmaceutical operations, R&D workflows, supply chain, and product distribution processes
- Studied pharmaceutical product development and quality assurance stages from formulation through market release
- Gained exposure to cross-functional collaboration between R&D, regulatory, and production teams

Intern
Curativa

- Supported evaluation of medical and cosmetic product formulations, contributing to product positioning and development discussions
- Analyzed market and ingredient trends to inform product improvement recommendations

Certifications & Training

- Aspire Leaders Program — 40 hours of intensive training in critical thinking, communication, and social impact *2025*

- McKinsey Forward Program — Certified in problem-solving, strategic thinking, and foundational digital business communication
- PharmaOverseas Summer Training — 30 credit hours on pharmaceutical operations *2024*
- Creativa Ideation Bootcamp — 36-hour training course on developing projects for potential startups
- Microbial Physiology Role in Cleaning Environment Program — SRTA-City *Feb 2025*
- Introduction to Nanotechnology — InfoSprint *Sep 2024*

Technical Skills

- **Laboratory Techniques:** PCR, DNA Extraction, Gel Electrophoresis, ELISA, Chromatography, Experimental Design, Data Recording & Analysis
- **Bioinformatics & Computational Tools:** Molecular Dynamic Simulations, PyMOL, Conda, Chemoinformatics, Structural Modeling
- **R&D & Scientific Skills:** Immunogenetics, Protein–Ligand Interaction Analysis, Product Development Support, Quality Assurance Awareness, Scientific Literature Review, Technical Report Writing
- **Languages:** Arabic (Native), English (Professional Proficiency)

Soft Skills

- **Analytical & Critical Thinking:** Strong ability to interpret complex biochemical and computational data to draw evidence-based conclusions
- **Attention to Detail:** Meticulous in experimental design, data recording, and protocol adherence
- **Adaptability & Flexibility:** Quickly learns new tools, software, and research methodologies across scientific domains
- **Time Management & Organization:** Skilled in prioritizing tasks and meeting research and project deadlines
- **Communication:** Able to translate complex scientific findings into clear, well-structured reports and presentations
